

# Deploy to Vercel

## AGENDA

1. Create a Vercel account
2. Import project from Github
3. Check auto deployment

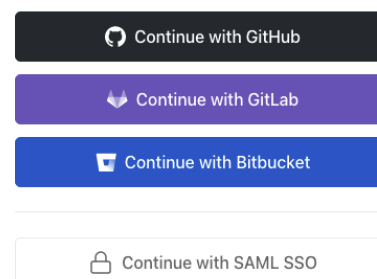

## 1. Create a Vercel account

1. Visit <https://vercel.com/signup>
2. Click **Continue with Github** button
3. Follow the steps to create your account

The screenshot shows the Vercel homepage. At the top is the Vercel logo. Below it are four feature highlights, each with a blue checkmark icon: 'Instant edge deploys' (Push to git and your website is live. Zero configuration required.), 'Collaborate with previews' (Every pull request gets its own preview URL. Share them to gather feedback or run tests.), 'Turn static to dynamic' (Generate blazing fast pages and augment them with rich JavaScript that brings your apps alive.), and 'Ship directly to the edge' (Always fast. Always online. Always a hit.). Below these is a section titled 'PROUDLY SERVING AMAZING COMPANIES' with logos for HashiCorp, McDonald's, Facebook, The Washington Post, Auth0, Twilio, Uber, and TripAdvisor.

## Join the best frontend teams

The screenshot shows the sign-up options on the Vercel website. There are four buttons: 'Continue with GitHub' (dark grey), 'Continue with GitLab' (purple), 'Continue with Bitbucket' (blue), and 'Continue with SAML SSO' (light grey). A red arrow points to the 'Continue with GitHub' button.

Already have an account? [Log in](#)

## 2. Import project from Github

### Let's build something new.

To deploy a new Project, import an existing Git Repository or get started with one of our Templates.

## 3. Check auto deployment

1. Make some changes to your local.
2. Push to github.
3. Checkout your vercel to see if there is a new deployment.

Enjoy! 🎉
